

Installation Instructions

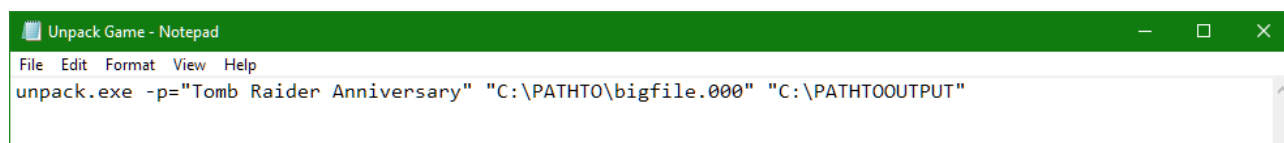

1. Extract [Gibbed.zip](#) and open the contained [Gibbed](#) directory:

Name	Date modified	Type	Size
projects	11/07/2012 03:13	File folder	
Gibbed.CrystalDynamics.FileFormats.dll	08/07/2012 04:49	Application extens...	9 KB
Gibbed.IO.dll	08/07/2012 04:49	Application extens...	19 KB
Gibbed.ProjectData.dll	08/07/2012 04:50	Application extens...	12 KB
ICSharpCode.SharpZipLib.dll	16/09/2011 05:27	Application extens...	192 KB
NDesk.Options.dll	08/07/2012 04:49	Application extens...	23 KB
pack	08/07/2012 04:49	Application	10 KB
unpack	08/07/2012 04:50	Application	13 KB

2. In the folder [Bat Files](#), move the contained [Pack Game.bat](#) and [Unpack Game.bat](#) files into the [Gibbed](#) directory from step 1.

Name	Date modified	Type	Size
projects	11/07/2012 03:13	File folder	
Gibbed.CrystalDynamics.FileFormats.dll	08/07/2012 04:49	Application extens...	9 KB
Gibbed.IO.dll	08/07/2012 04:49	Application extens...	19 KB
Gibbed.ProjectData.dll	08/07/2012 04:50	Application extens...	12 KB
ICSharpCode.SharpZipLib.dll	16/09/2011 05:27	Application extens...	192 KB
NDesk.Options.dll	08/07/2012 04:49	Application extens...	23 KB
Pack Game	01/03/2018 17:59	Windows Batch File	1 KB
pack	08/07/2012 04:49	Application	10 KB
Unpack Game	01/03/2018 17:59	Windows Batch File	1 KB
unpack	08/07/2012 04:50	Application	13 KB

3. This is the trickiest part, so follow along carefully! Right-click on **Unpack Game.bat** and select **Edit**. This will open the file in **Notepad** and show the following default text:

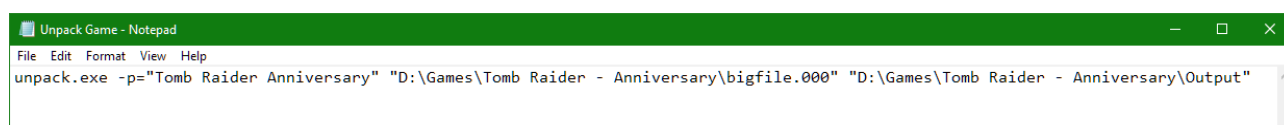

```
Unpack Game - Notepad
File Edit Format View Help
unpack.exe -p="Tomb Raider Anniversary" "C:\PATHTO\bigfile.000" "C:\PATHTOOUTPUT"
```

In the second set of quotes, **"C:\PATHTO\bigfile.000"**, you'll need to specify the installation directory of your game as this is where **bigfile.000** will be contained. If you don't have administrative privileges, you will need to copy all 27 of these bigfiles into another location (like **Documents**) and set that as your specified path.

The third set of quotes, **"C:\PATHTOOUTPUT"**, must be set to a new folder that you create alongside wherever your bigfiles are stored.

Here as an example where **Tomb Raider Anniversary** is installed in a folder on my **D:** drive:

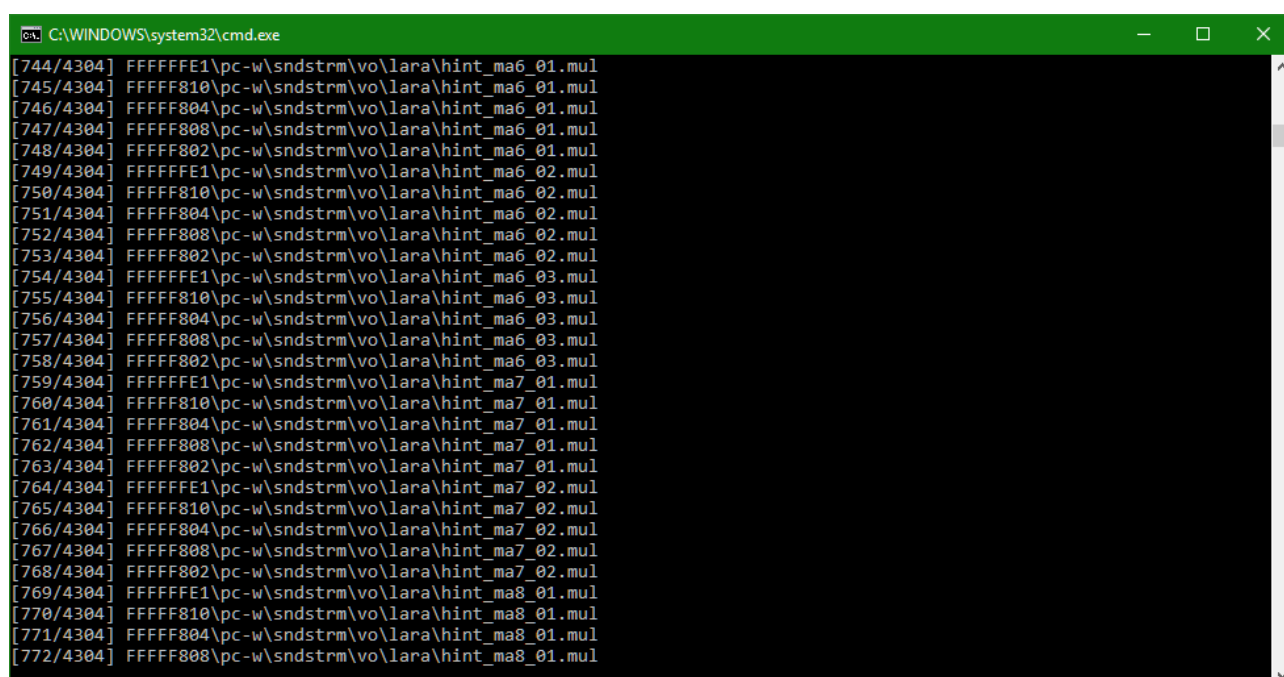

```
Unpack Game - Notepad
File Edit Format View Help
unpack.exe -p="Tomb Raider Anniversary" "D:\Games\Tomb Raider - Anniversary\bigfile.000" "D:\Games\Tomb Raider - Anniversary\Output"
```

Save the file and close it when you've done this.

4. Now you just need to double-click the **Unpack Game.bat** file to run it. You may find that right-clicking it instead and selecting **Run as administrator** is beneficial if your game is installed in **Program Files** or **Program Files (x86)**.

A command window will pop up and show you the tool's progress as it extracts all the files. Wait for it to completely finish and the window will close automatically.

5. Now to make it easy to uninstall this mod without having to uninstall/reinstall the whole game, go to your game's installation directory and create a new folder called [Backup](#). Move all 27 of the [bigfile.0##](#) files from the above directory into here. To revert your game to its original state (uninstalling this mod), just move the files from this [Backup](#) directory back into the main folder, overwriting the modified ones that we will now create.

6. Navigate to the folder you specified in step 3 as being your output directory.

Name	Date modified	Type	Size
default	01/03/2018 18:17	File folder	
FFFFFF802	01/03/2018 18:17	File folder	
FFFFFF804	01/03/2018 18:17	File folder	
FFFFFF808	01/03/2018 18:17	File folder	
FFFFFF810	01/03/2018 18:17	File folder	
FFFFFFE1	01/03/2018 18:17	File folder	
FFFFFFE2	01/03/2018 18:17	File folder	
FFFFFFE4	01/03/2018 18:17	File folder	
FFFFFFE8	01/03/2018 18:17	File folder	
FFFFFFF0	01/03/2018 18:17	File folder	
bigfile.xml	01/03/2018 18:19	XML File	508 KB

Open the folder [default](#), then open [pc-w](#).

Now in a separate window, open the [Mod Files](#) folder from your download.

Name	Date modified	Type	Size
cine_lara.drm	01/03/2018 18:34	DRM File	18,924 KB
frontend_lara.drm	01/03/2018 18:37	DRM File	19,554 KB
lara.drm	01/03/2018 18:29	DRM File	24,758 KB
uigeneral.drm	01/03/2018 18:30	DRM File	994 KB

Select *all* the files contained inside (there will likely be far more than the four shown above once this mod is updated). Move them into the [pc-w](#) directory you opened above, overwriting the original files when asked.

Replace or Skip Files

Copying 4 items from [Mod Files](#) to [pc-w](#)

The destination has 4 files with the same names

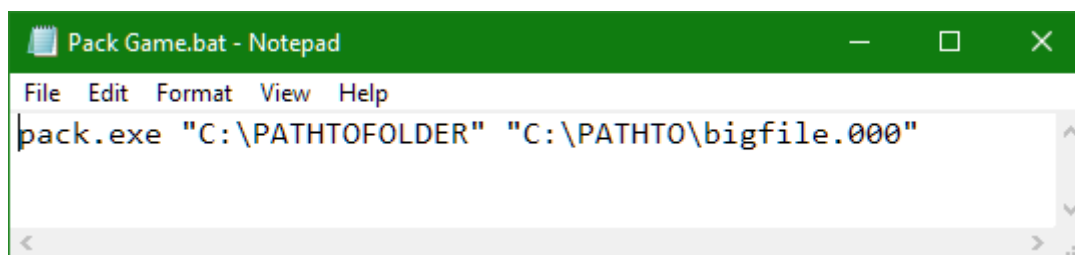

☒ Replace the files in the destination

☐ Skip these files

☐ Let me decide for each file

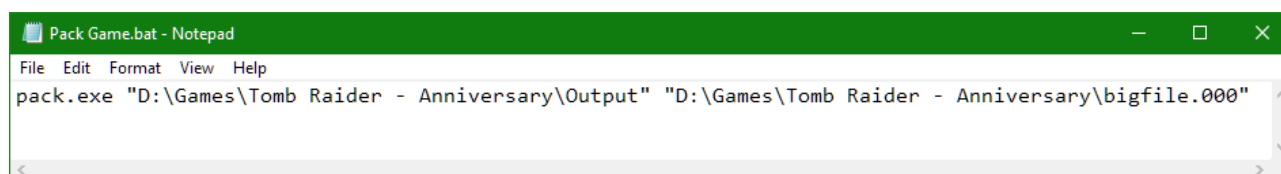

☐ More details

7. When the files have finished moving across, go back to your [Gibbed](#) folder. Right-click on [Pack Game.bat](#) and select [Edit](#). As with step 3, you'll need to change the text here:

```
File Edit Format View Help
pack.exe "C:\PATHTOFOLDER" "C:\PATHTO\bigfile.000"
```

This time though you just need to switch around the two sets of paths you set in step 3.

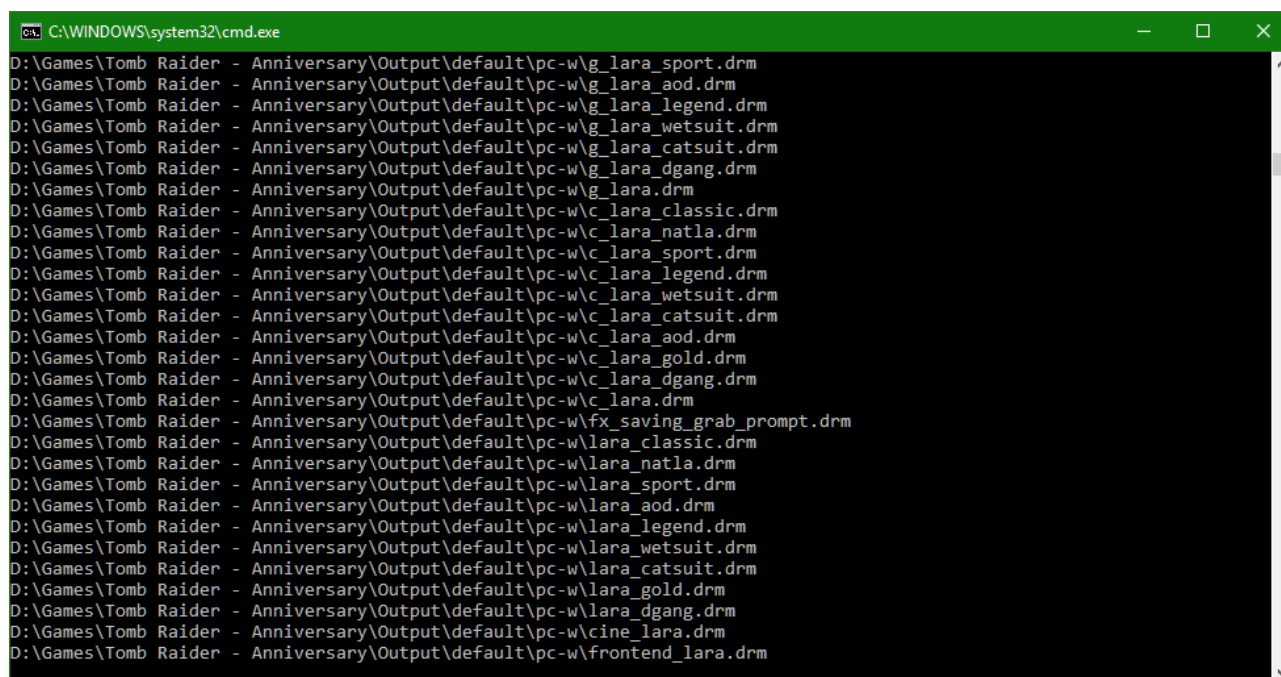

```
File Edit Format View Help
pack.exe "D:\Games\Tomb Raider - Anniversary\Output" "D:\Games\Tomb Raider - Anniversary\bigfile.000"
```

Save the file and close it when you've done this.

8. Double-click the [Pack Game.bat](#) file to run it. Again, you may find that right-clicking it instead and selecting [Run as administrator](#) is beneficial if your game is installed in [Program Files](#) or [Program Files \(x86\)](#).

Another command window will pop up and show you its progress as it repacks all the files. Wait for it to finish and it will close automatically.

Now you can delete the [Output](#) folder to save space.

Congratulations, installation is complete! You can also delete anything left inside this mod's download folder.
